Dear Sir/Madam,

SUB: RATING ACTION BY ICRA RATINGS

REF: REGULATION 30 READ WITH SCHEDULE III OF THE SEBI (LISTING OBLIGATIONS AND DISCLOSURE REQUIREMENTS) REGULATIONS, 2015

This is to inform you that credit rating agency ICRA Ratings has re-affirmed rating for various instruments of Axis Bank Limited ("the Bank").

The rating rationale is attached herewith.

This is for your information and records.

Thanking you.

Yours faithfully,

For Axis Bank Limited

Certificates of Deposit	60,000.00	60,000.00	[ICRA]A1+; reaffirmed
Fixed Deposit	-	-	[ICRA]AAA (Stable); reaffirmed
Total	1,20,060.00	1,20,060.00	

*Instrument details are provided in Annexure I

Rationale

Axis Bank Limited's (Axis Bank) ratings continue to be supported by its strong position in the Indian financial system as it is the third-largest private sector bank with a 5.9%¹ share in advances and a 5.2% share in the deposits of the banking system as on June 30, 2024. Further, its capitalisation profile remains strong and well above the regulatory levels, supported by higher internal accruals. Despite the steady increase in operating expenses (opex)², the bank was able to maintain its profitability, driven by improved net interest margins (NIMs).

Axis Bank's ratings also factor in the strong liability profile with a high share of retail term deposits (RTDs) and current account and savings account (CASA) deposits in total deposits. Additionally, the headline asset quality metrics have remained on an improving trajectory, supported by steady recoveries and upgrades as well as the gradual decline in fresh non-performing advances (NPAs) generation. Going forward, the asset quality would remain monitorable in the backdrop of the persisting high interest rates, geopolitical issues and concerns around overleveraging among retail borrowers. However, credit costs are expected to remain lower in relation to the operating profitability, given the strong asset quality. The bank is expected to generate healthy internal accruals. Over and above this, Axis Bank continues to operate with large prudent provisions, which can help absorb some of the impact of any asset quality challenges.

The Stable outlook on the ratings reflects ICRA's view that Axis Bank will continue to sustain its strong position in the Indian banking sector while maintaining its asset quality, profitability and solvency position.

Key rating drivers and their description

Credit strengths

Strong position in financial services industry supports the share of granular assets – Axis Bank is the third-largest private sector bank and the seventh-largest bank in the overall Indian banking sector, with the share of advances in banking sector credit at 5.9% as on June 30, 2024 (6.2% as on June 30, 2023). Furthermore, it offers various financial services across investment banking, asset management, securities broking and lending through its subsidiaries, namely Axis Capital Limited, Axis Asset Management Company Limited, Axis Finance Limited and Axis Securities Limited. It also has a presence in the insurance business with the Group's stake of ~19% in Max Life Insurance Company Limited as on June 30, 2024.

Axis Bank's net advances witnessed strong growth and stood at Rs. 9.80 lakh crore (up 14.2% YoY) as on June 30, 2024 and it has maintained its market position as the third-largest private sector bank in the industry. The growth momentum was largely

¹ All ratios as per ICRA's calculations

² Excluding one-time expense/write-off related to acquisition of Citibank's India consumer business

driven by the granular retail book, which continued to rise at a comparatively higher pace of ~18% YoY as on June 30, 2024. Going forward, ICRA expects the bank to remain focused on growing its granular retail book.

Capital cushions remain strong – Axis Bank’s capitalisation profile remains strong with the common equity Tier I (CET I) and CRAR (as a percentage of risk-weighted assets; RWAs) at 14.06%³ and 16.65%¹, respectively, as on June 30, 2024. The healthy capital cushion, supported by the capital raise during FY2018-FY2021, and the subsequently improved earnings profile helped offset the impact of goodwill and intangibles impairment related to the acquisition of Citibank’s India consumer business as well as the capital charge of the acquired book in FY2023. Additionally, the overall earnings profile continues to support asset growth along with strong capitalisation. In ICRA’s view, the current capital position is sufficient to support Axis Bank’s growth requirements as well as absorb unforeseen asset quality shocks, while keeping the capital cushion and solvency better than the negative rating triggers.

Steady growth in granular deposit base – The bank’s overall deposit base grew by a strong 13% YoY to Rs. 10.62 lakh crore as on June 30, 2024. Within overall deposits, low-cost CASA stood strong at 41.8% as on June 30, 2024, which remains higher than the private sector average, but lower than the 44-46% levels seen in the past. Nevertheless, Axis Bank continues to steadily grow its granular RTD base and CASA and RTD together dominate the total deposits.

Axis Bank’s interest rate proposition is in line with the peer rated private sector banks for most of the deposit tenures, which has helped it reduce the differential in its cost of interest-bearing funds with these banks as well as the banking sector average. Compared to the banking sector average of 5.31% in Q1 FY2025, Axis Bank’s cost of interest-bearing funds stood at 5.28% (4.84% in Q1 FY2024 and 4.94% in FY2024). The YoY increase in the cost of funds was due to the systemic increase in interest rates and the consequent upward repricing of deposits. Going forward, the bank’s ability to achieve stronger growth while maintaining or improving the cost differential will remain key for its operating profitability.

Earnings profile improves; sizeable prudent provisions provide cushion to profitability – NIM/average total assets witnessed a sustained improvement to 3.65% in Q1 FY2025 (3.57% in FY2024, 3.45% in FY2023 and 3.06% in FY2022), largely led by the expansion in interest spreads and better asset quality levels. The strong growth in net advances, expansion in interest spreads and steady non-interest income levels was partially offset by the relatively higher operating expenses as the bank continues to grow its franchise. A one-time charge related to the impairment of goodwill arising out of the Citibank acquisition led to a moderation in the return on assets (RoA) to 0.8% in FY2023 from 1.2% in FY2022. While it improved to 1.8% in FY2024, the RoA moderated to 1.6% in Q1 FY2025 on account of the normalisation of credit costs. Moreover, the bank continued to hold prudent provisions of Rs. 5,012 crore or 0.5% of standard advances as on June 30, 2024. Overall, ICRA expects Axis Bank to maintain an RoA of more than 1.0%, which shall be sufficient for its growth capital requirements over the medium term.

Credit challenges

Asset quality remains monitorable – The gross fresh NPA generation rate moderated to 1.7% (annualised) in FY2024 from 2.0-3.3% during FY2021-FY2023, which was meaningfully lower than the levels seen prior to the onset of the Covid-19 pandemic. The gross slippage rate witnessed a mild uptick to 2.0% in Q1 FY2025. Slippages remains higher in the retail segment as lumpy slippages in the corporate book have been limited. The asset quality remains monitorable given the concerns around overleveraging in the retail segment, the seasoning of the recently originated book amid the persisting elevated interest rate environment and geopolitical issues. The headline asset quality numbers remain on an improving trajectory and the gross and net NPAs stayed steady at 1.6% and 0.4%, respectively, as on June 30, 2024 (1.6% and 0.3%, respectively, as on March 31, 2024). This was supported by the moderating slippage rate, steady recoveries and upgrades. Axis Bank’s overall restructured book also remained manageable (0.1% of standard advances) as on June 30, 2024. Its ability to contain slippages and maintain healthy recovery rates will remain key for maintaining the asset quality in the near to medium term.

³ Including Q1 FY2025 profit

Environmental and social risks

While banks like Axis Bank do not face material physical climate risks, they are exposed to environmental risks indirectly through their portfolio of assets. If the entities or businesses, to which banks and financial institutions have an exposure, face business disruptions because of physical climate adversities or if they face climate transition risks because of technological, regulatory or customer behaviour changes, the same could translate into credit risks for banks. However, such risks are not material for Axis Bank as it benefits from adequate portfolio diversification. Further, the lending is typically short-to-medium term, allowing it to adapt and take incremental exposure to businesses that face relatively fewer downside environmental risks.

With regard to social risks, data security and customer privacy are among the key sources of vulnerability for banks as material lapses could be detrimental to their reputation and invite regulatory censure. Axis Bank has not faced such lapses over the years, which highlights its sensitivity to such risks. It is seen to be operating responsibly in terms of its selling practices with no instances of fines being imposed by the regulatory authorities because of misconduct. Customer preference is increasingly shifting towards digital banking, which provides an opportunity to reduce the operating costs. Axis Bank has been at the forefront of making the requisite investments to enhance its digital interface with its customers. While it contributes to promoting financial inclusion by lending to the underserved segments, its lending practices remain prudent, as reflected in the healthy asset quality numbers in this segment compared with its peers.

Liquidity position: Strong

Axis Bank's liquidity remains strong with the daily average liquidity coverage ratio (LCR) at 120% in Q1 FY2025 against the regulatory requirement of 100%. Besides this, the bank's reported net stable funding ratio (NSFR) stood at 132% as on June 30, 2024, above the regulatory ask of 100%. The excess statutory liquidity ratio (SLR) holding above the regulatory levels can be utilised to avail liquidity support from the Reserve Bank of India (RBI; through reverse repo) apart from the marginal standing facility of the RBI in case of urgent liquidity requirement.

Rating sensitivities

Positive factors – Not applicable as all the ratings are at the highest possible levels

Negative factors – ICRA could downgrade the ratings if there is a material weakening in the bank's liability franchise, thereby impacting its resource profile. This apart, a deterioration in the asset quality or capital position, leading to the weakening of the solvency profile with net NPA/core capital of more than 15% on a sustained basis, could be a negative trigger. Further, a sustained RoA of less than 1.0% and/or a fall in the capital cushions over the regulatory levels to less than 4% at the CET I level, on a sustained basis, will remain negative triggers. Additionally, the weakening of the distributable reserves (DRs) eligible for the coupon payment on the AT-I bonds will be a negative trigger for the rating for these bonds.

Analytical approach

Analytical Approach	Comments
Applicable rating methodologies	ICRA's Rating Methodology for Banks and Financial Institutions ICRA's Rating Methodology on Consolidation
Parent/Group support	Not Applicable
Consolidation/Standalone	For arriving at the ratings, ICRA has considered the standalone financials of Axis Bank. However, in line with ICRA's consolidation approach, the capital/funding requirement of the Group's various subsidiaries/joint ventures, going forward, has been factored in.

About the company

Incorporated in December 1993, Axis Bank Limited is a private sector bank. Its promoter group includes Life Insurance Corporation of India (LIC), which held 7.92% of the shares as on June 30, 2024. As on June 30, 2024, Axis Bank had the third-largest network of branches among private sector banks with 5,427 branches and an international presence through branches

in DIFC (Dubai) and Singapore along with representative offices in Abu Dhabi, Sharjah, Dhaka and Dubai and an offshore banking unit in GIFT City.

Complexity level of the rated instruments

Instrument	Complexity Indicator
Infrastructure Bonds	Very Simple
Basel III Tier II Bonds	Highly Complex
Basel III Tier I Bonds	Highly Complex
Certificates of Deposit	Very Simple
Fixed Deposit	Very Simple

The Complexity Indicator refers to the ease with which the returns associated with the rated instrument could be estimated. It does not indicate the risk related to the timely payments on the instrument, which is rather indicated by the instrument's credit rating. It also does not indicate the complexity associated with analysing an entity's financial, business, industry risks or complexity related to the structural, transactional or legal aspects. Details on the complexity levels of the instruments are available on ICRA's website: [Click Here](#)

Key features of the rated instruments

The servicing of the Basel III Tier II bonds is not subject to any capital ratios and profitability. However, the Basel III Tier II bonds and Basel III Tier I bonds (AT-I bonds) are expected to absorb losses once the point of non-viability (PONV) trigger is invoked.

Further, the exercise of the call option on the Basel III Tier II and Tier I bonds is contingent upon the prior approval of the RBI. Moreover, the bank will need to demonstrate that the capital position is well above the minimum regulatory requirement, post the exercise of the said call option.

The rated Tier I bonds have the following loss-absorption features that make them riskier:

- Coupon payments are non-cumulative and discretionary, and the bank has full discretion at all times to cancel coupon payments. Cancellation of discretionary payments shall not be an event of default.
- Coupons can be paid out of the current year's profits. If the current year's profit is not sufficient or if the payment of the coupon is likely to result in a loss, the coupon payment can be made through the reserves and surpluses⁴ created via the appropriation of profits (including statutory reserves). However, the coupon payment is subject to the bank meeting the minimum regulatory requirements for the CET I, Tier I and total capital ratios (including capital conservation buffer, CCB) at all times as prescribed by the RBI under the Basel III regulations.

⁴ Calculated as per the amendment in Basel III capital regulations for Tier I bonds by the RBI, vide its circular dated February 2, 2017. As per the amended definition, DRs include all reserves created through appropriations from the profit and loss account

These Tier I bonds are expected to absorb losses through the write-down mechanism at the objective prespecified trigger point fixed at the bank's CET I ratio as prescribed by the RBI, i.e. 6.125% of the total RWAs of the bank or when the PONV trigger is breached in the RBI's opinion.

Given the above distinguishing features of the Tier I bonds, ICRA has assigned a one notch lower rating on these than the rating on the Tier II instruments. The DRs that can be used for servicing the coupon in a situation of inadequate profit or a loss during the year stood at a comfortable 8.6% of RWAs as on March 31, 2024.

The rating on the Tier I bonds continues to be supported by the bank's capital profile, which is likely to remain comfortable, given the outlook on its profitability. However, the transition to the expected credit loss (ECL) framework and its impact on the capital and DRs remain monitorable.

Annexure II: List of entities considered for consolidated analysis

Company Name	Ownership*	Consolidation Approach [§]
Axis Capital Limited	100.00%	Full Consolidation
Axis Trustee Services Limited	100.00%	Full Consolidation
